

When it comes to backs, we're out in front.

The Hospital of Central Connecticut recently became the first in Greater Hartford, and only the second in the state, to perform an artificial cervical spinal disc implant. An alternative to spinal fusion for some patients with severe disc problems, the surgery was performed on Cindy Bossi of Southington. Bossi, 53, suffered for months with pain and restricted arm movements caused by a bulging cervical disc, degenerative arthritis and bone spurs.

Advanced neurosurgical procedures like this are just one reason why our Joint and Spine Center is steps ahead of our competition. The Joint and Spine Center at The Hospital of Central Connecticut. Less pain, more gain.

To learn more about our neurosurgical and orthopedic services, please call 860-224-5186.
